

Berkeley Emerging
Research Scholars (BERS):

Laboratory Research Experience Program

June 26 - August 04, 2017

About the Program

Through Dean Douglas S. Clark and the College of Chemistry, Professor Omar M. Yaghi, Professor Peidong Yang, and Mr. Kyle E. Cordova have designed a laboratory research experience program, in which participating scholars are exposed to graduate student level research. This is a laboratory-intensive program that seeks to prepare highly qualified emerging scholars for doctoral studies. Through this program, you will learn to think independently, process advanced concepts and apply theory, effectively communicate and substantiate your ideas to others, and build group dynamic skills while being mentored through the research modules.

The BERS: Laboratory Research Experience Program distinguishes itself from other research-based programs in the following aspects:

Brought to you by the TOP RANKED chemistry program in the world. The Laboratory Research Experience Program is administered and delivered by the College of Chemistry at UC Berkeley and is taught by its own globally ranked faculty.

Training in ACTION. As a participating scholar, you will gain hands-on practical experience on advanced techniques, including, but not limited to, X-ray diffraction, electron microscopy (SEM and TEM), surface-enhanced Raman spectroscopy, gas adsorption, and nuclear magnetic resonance spectroscopy.

Combines general knowledge with cutting edge research. Participating scholars will perform cutting edge research that parallels the research that is done at UC Berkeley and at the Lawrence Berkeley National Laboratory.

Provides invaluable insight into graduate school life at UC Berkeley. The program is designed to mirror life in graduate school - everything from experimental design to collaborative experimentation. Participating scholars will also attend weekly seminars provided by UC Berkeley faculty and mingle with current UC Berkeley students to solicit their advice on the graduate school application process and to get a better sense of graduate school life.

Continuous interaction with Berkeley professors and students. Continuous interactions will better inform UC Berkeley professors and mentors when writing recommendation letters.

Program Highlights

Gain Research Experience

In UC Berkeley's world class laboratories, you will gain hands-on, practical experience in performing cutting edge research. You will be trained like a professional chemist and will utilize state-of-the-art instrumentation.

BERS Symposium

At the culmination of the research experience, you will present your work at the Berkley Emerging Research Scholars Symposium. The entire College of Chemistry is invited to attend; in which you will showcase the skills you acquired.

Weekly Seminars from Distinguished Scholars

Weekly seminars from distinguished UC Berkeley professors will allow you to engage in scientific discussions and learn more about the research being conducted on campus. Lunch outings after the seminars provide you with the opportunity to foster a relationship with these professors.

Build your Professional Network

Successful completion of the program will earn you a certificate signed by the Dean of the College of Chemistry. Additionally, through building strong relationships with UC Berkeley professors, you will earn letters of recommendation for your graduate school application.

Participating Faculty

Omar M. Yaghi

James and Neeltje Tretter Chair Professor of Chemistry

Pioneer in the science of building chemical structures from molecular building blocks; a field referred to as reticular chemistry.

Peidong Yang

S. K. Angela Chan Distinguished Professor of Energy; MacArthur Genius Award Recipient

Researches materials chemistry, inorganic chemistry; specifically, low-dimensional nanoscopic building blocks to assemble complex architectures with novel electronic and photonic properties.

Jeffrey A. Reimer

Warren and Katharine Schlinger Distinguished Professor in Chemical Engineering; C. Judson King Professor of Chemical and Biomolecular Engineering

Researches materials chemistry, applied spectroscopy, alternative energy, including a diverse array of contributions in expanding and applying spectroscopy for materials research.

Gabor A. Somorjai

University Professor; Professor of the Graduate School

Research lies in physical chemistry, solid state chemistry, surface science and catalysis, research focus is atomic and molecular level understanding of surfaces to understand macroscopic surface phenomena.

Kristie A. Boering

Professor of Earth and Planetary Science; Lieselotte and David Templeton Professor of Chemistry

Research lies in atmospheric chemistry and transport. Specifically, the chemistry and mass transport in Earth's and extraterrestrial atmospheres are studied through kinetics and photochemistry experiments.

F. Dean Toste

Professor of Chemistry

Organic and organometallic chemistry are employed in the development of new synthetic methods, enantioselective catalysts and strategies for the synthesis of natural products.

Laboratory Research Experience Curriculum

Week 1: Synthesis, Characterization, and Post-Synthetic Modification of Metal-Organic Frameworks

- Synthesis of metal-organic frameworks
- Powder X-ray diffraction, gas adsorption, and thermal gravimetric analysis characterization techniques
- "Crystals as molecules": hands-on use of nuclear magnetic resonance characterization techniques

Week 2: Morphological Control of Ag Nanoparticles: Synthesis and Applications

- Nanofabrication techniques
- Electron microscopy characterization (SEM and TEM)
- Surface-enhanced Raman spectroscopy
- Fluorescence spectroscopy

Week 3: Chemistry and Reactivity of Transition Metal Complexes

- Ligand design through salt metathesis and the template effect
- Coordination compound chemistry
- Homogeneous catalysis

Week 4: Synthesis, Characterization, and Gas Adsorption Properties of Covalent Organic Frameworks

- Advanced synthetic techniques for realizing covalent organic frameworks
- Computational modeling and simulation techniques coupled with powder X-ray diffraction analysis
- Advanced gas adsorption measurements and analysis

Week 5: Superacidity in Porous Materials: Applications toward Heterogeneous Catalysis

- Superacidity and acid-base chemistry
- Hammett indicator analysis
- Heterogeneous catalysis

Week 6: Science Communication

- Keys to success in publishing high impact scientific results
- How to effectively communicate your results via oral and poster presentations
- BERS Symposium

“We provide emerging scholars the opportunity to experience, learn from, and engage with the world’s best scientists at UC Berkeley. Emerging scholars will undoubtedly gain a foundation on which to build their future scientific careers on.”

-Omar M. Yaghi

Eligibility

Undergraduate students (sophomore, junior, or senior standing) from the US and abroad are encouraged to apply and participate in the program. Those accepted must have taken both general and organic chemistry (with accompanying laboratory classes). Successful applicants will be among the top 10% of their respective class and must demonstrate fluency in English. Please note that this is a highly selective program.

Course Details

The Laboratory Research Experience Program will take place through the College of Chemistry on the historic UC Berkeley campus. This program is held every summer for a six-week duration.

Program tuition includes all laboratory and course materials, instrument and research facilities use, seminars, daily meal, UC Berkeley “swag”, and end-of-the-program research posters.

Admission is rolling, applications will close once 28 scholars are accepted into the program. For more information regarding dates, tuition fees, and application visit our website: chemistry.berkeley.edu/bers/lre
